

The Argus HIPSM™ was developed to simplify the integration of our pigging solutions by supplying all auxiliary components in a complete package. This turnkey solution can be more easily added to existing infrastructure than traditional pigging equipment options. The selection and assembly of these components by Argus ensures the final product's compatibility and suitability. The result provides more predictable costing and operational characteristics.

OVERVIEW:

- + True double-block-and-bleed system when pigging, achieved by both upstream and downstream isolation valves.
- + Soft-seated isolation ball valves, metal-seated are optional.
- + Soft-seated pig valve offers bubble tight "zero leakage" shutoff.
- + Drain and Bleed valves provided for safe and efficient operation.
- + Non-intrusive pig indication for visual confirmation that the pig has entered or left the pig valve.

ADDITIONAL SAFETY:

- + PID (Gauge) is supplied for safety redundancy.
- + Supplied with permanent lifting lugs for safe and efficient handling and installation.
